

# RMCF / RMCP Series

General Purpose Thick Film Standard Power and High-Power Chip Resistor

Stackpole Electronics, Inc.

Resistive Product Solutions

## Features:

- RMCF – standard power ratings
- RMCP – high power ratings
- Nickel barrier terminations standard
- Power derating from 100% at 70°C to zero at +155°C
- RoHS compliant, REACH compliant, and halogen free
- AEC-Q200 compliant (except 01005 size)
- For ultra-high power, see [RMCP-UP Series – Thick Film Ultra High-Power Chip Resistor](#)

## Electrical Specifications - RMCF

## Repetitive Pulse Information

(This information is for reference only and is not guaranteed performance.)

If repetitive pulses are applied to resistors, pulse wave form must be less than “Pulse Limiting Voltage”, “Pulse Limiting Current” or “Pulse Limiting Wattage” calculated by the formula below.

$$V_p = K\sqrt{P \times R \times T / t}$$

$$I_p = K\sqrt{P / R \times T / t}$$

$$P_p = K^2 \times P \times T / t$$

Where:  $V_p$ : Pulse limiting voltage (V)

$I_p$ : Pulse limiting current (A)

$P_p$ : Pulse limiting wattage (W)

$P$ : Power rating (W)

$R$ : Nominal resistance (ohm)

$T$ : Repetitive period (sec)

$t$ : Pulse duration (sec)

$K$ : Coefficient by resistors type (refer to below matrix)

[ $V_r$ : Rated Voltage (V),  $I_r$ : Rated Current (A)]

Note 1: If  $T > 10 \rightarrow T = 10$  (sec),  $T/t > 1000 \rightarrow T/t = 1000$

Note 2: If  $T > 10$  and  $T/t > 1000$ , “Pulse Limiting power (Single pulse) is applied

Note 3: If  $V_p < V_r$  ( $I_p < I_r$  or  $P_p < P$ ),  $V_r$  ( $I_r$ ,  $P$ ) is  $V_p$  ( $I_p$ ,  $P_p$ )

Note 4: Pulse limiting voltage (current, wattage) is applied at less than rated ambient temperature. If ambient temperature is more than the rated temperature (70°C), please decrease power rating according to “Power Derating Curve”

Note 5: Please assure sufficient margin for use period and conditions for “Pulse Limiting Voltage”

Note 6: If the pulse waveform is not square wave, please judge after transform the waveform into square wave according to the “Waveform Transformation to Square Wave”.

## RMCF Coefficient (K) Matrix

| Ohmic Value                   | K    |
|-------------------------------|------|
| $R < 10\Omega$                | 0.50 |
| $10\Omega \leq R < 100\Omega$ | 0.45 |
| $100\Omega \leq R < 1K\Omega$ | 0.35 |
| $1K\Omega \leq R < 10K\Omega$ | 0.25 |
| $10K\Omega \leq R$            | 0.20 |

## Waveform Transformation to Square Wave

1. Discharge curve wave with time constant "t" → Square wave

2. Damping oscillation wave with time constant of envelope "t" → Square wave

3. Half-wave rectification wave → Square wave

4. Triangular wave → Square wave

5. Special wave → Square wave

## Recommended Solder Profile

This information is intended as a reference for solder profiles for Stackpole resistive components. These profiles should be compatible with most soldering processes. These are only recommendations. Actual numbers will depend on board density, geometry, packages used, etc., especially those cells labeled with “\*”.

## 100% Matte Tin / RoHS Compliant Terminations

Soldering iron recommended temperatures: 330°C to 350°C with minimum duration.  
Maximum number of reflow cycles is 3.

| Wave Soldering    |            |             |            |

Stackpole Electronics, Inc.

Resistive Product Solutions

The data provided are for reference only. They are typical performance for this product but are not guaranteed. The actual pulse handling of each individual resistor may vary depending on a variety of factors including resistance tolerance and resistance value. Stackpole Electronics, Inc. assumes no liability for the use of this information. Customers should validate the performance of these products in their applications. Contact Stackpole Marketing at [marketing@seielect.com](mailto:marketing@seielect.com) to discuss specific pulse application requirements.

### Temperature Measurement of Resistor Surface

Description: The resistor surface generated temperature variation after applied voltage.

| Size                  | 0201 | 0402  | 0603  | 0805 | 1206 | 1210 | 2010 | 2512 |
|-----------------------|------|-------|-------|------|------|------|------|------|
| R-V                   | 15K  | 40.2K | 57.6K | 180K | 182K | 100K | 100K | 75K  |
| Rated Power (W)       | 1/20 | 1/16  | 1/10  | 1/8  | 1/4  | 1/2  | 3/4  | 1    |
| Max Rated Voltage (V) | 25   | 50    | 75    | 150  | 200  | 200  | 200  | 200  |

Test method: Measure component surface temperature directly after the temperature stabilizes.

Test result: As per table below:

The thermal resistance of the RMCP will be similar to the RMCF. For example, the RMCF2512 and the RMCP2512 will have similar surface temperatures at 1W; the RMCP is designed to withstand higher temperatures associated with high power levels.

### Part Marking Specifications

#### E96 Values for 0805-2512 (1% tolerance)

The nominal resistance is marked on the surface of the overcoating with the use of **four character markings**.

- Values < 100Ω will use "R" as the decimal holder.

#### E24 Values for 0805-2512 (1% tolerance)

The nominal resistance is marked on the surface of the overcoating with the use of **three or four character markings**.

|          |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |    |
|----------|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|
| E24 Code | 10 | 11 | 12 | 13 | 15 | 16 | 18 | 20 | 22 | 24 | 27 | 30 | 33 | 36 | 39 | 43 | 47 | 51 | 56 | 62 | 68 | 75 | 82 | 91 |
|----------|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|

3-digit marking in E24 values (1% tolerance)

First and second digits are E24 code; third digit is the multiplier. Values < 100Ω will use "R" as the decimal holder

4-digit marking in E24 values (1% tolerance)

Values < 100Ω will use "R" as the decimal holder

| 3 or 4-digit marking |         |         |
|----------------------|---------|---------|
| Resistance           | 6.2 KΩ  |         |
| Marking              | 3-digit | 4-digit |
|                      | 622     | 6201    |

#### E24 Values for 0805-2512 (5% tolerance, ≤ 0.91Ω)

The nominal resistance is marked on the surface of the overcoating with the use of **four character markings**.

- Values ≤ 0.91Ω will use "R" as the decimal holder.

#### E24 Values for 0805-2512 (5% tolerance, ≥ 1Ω)

The nominal resistance is marked on the surface of the overcoating with the use of **three character markings**.

- Values between 1Ω and 9.1Ω will use "R" as the decimal holder.

#### E24 Values for 0603

The nominal resistance is marked on the surface of the overcoating with the use of **three character markings**.

- Values between 0.1Ω and 9.1Ω will use "R" as the decimal holder.
- Values ≥ 10Ω will use no decimal holder.
- 5% tolerance is not underlined. 1% tolerance is underlined.  
(Effective date for 1% underline marking is date codes on/or after April 1<sup>st</sup> 2025)
- Values that are both E24 and E96 follow E96 marking rules.

## Part Marking Specifications (cont.)

### E96 Values for 0603 size (1% tolerances)

A two character number is assigned to each standard R-Value (E96) as shown in the chart below. This is followed by one alpha character which is used as a multiplier. Each letter from "Y" - "F" represents a specific multiplier.

10.5Ω

| Alpha Character = Multiplier |             |
|------------------------------|-------------|
| Y = 0.1                      | C = 1000    |
| X = 1                        | D = 10000   |
| A = 10                       | E = 100000  |
| B = 100                      | F = 1000000 |

| Chip Marking | Value                 |
|--------------|-----------------------|
| 01B =        | 10.0 x 100 = 1 KΩ     |
| 25C =        | 17.8 x 1000 = 17.8 KΩ |
| 93D =        | 90.9 x 10000 = 909 KΩ |

| E96 |         |    |         |    |         |    |         |    |         |    |         |
|-----|---------|----|---------|----|---------|----|---------|----|---------|----|---------|
| #   | R-Value | #  | R-Value | #  | R-Value | #  | R-Value | #  | R-Value | #  | R-Value |
| 01  | 10.0    | 17 | 14.7    | 33 | 21.5    | 49 | 31.6    | 65 | 46.4    | 81 | 68.1    |
| 02  | 10.2    | 18 | 15.0    | 34 | 22.1    | 50 | 32.4    | 66 | 47.5    | 82 | 69.8    |

| 15  | 14.0    | 31 | 20.5    | 47 | 30.1    | 63 | 44.2    | 79 | 64.9    | 95 | 95.3    |
| 16  | 14.3    | 32 | 21.0    | 48 | 30.9    | 64 | 45.3    | 80 | 66.5    | 96 | 97.6    |

Note: 01005, 0201, and 0402 sizes are unmarked.

## RoHS Compliance

Stackpole Electronics has joined the worldwide effort to reduce the amount of lead in electronic components and to meet the various regulatory requirements now prevalent, such as the European Union's directive regarding "Restrictions on Hazardous Substances" (RoHS 3). As part of this ongoing program, we periodically update this document with the status regarding the availability of our compliant components. All our standard part numbers are compliant to EU Directive 2011/65/EU of the European Parliament as amended by Directive (EU) 2015/863/EU as regards the list of restricted substances.

| RoHS Compliance Status  |   |                            |                                |                                   |
|-------------------------|---|----------------------------|--------------------------------|-----------------------------------|
| Standard Product Series | Description   | Package / Termination Type | Standard Series RoHS Compliant | Lead-Free Termination Composition |
| RMCF                    | General Purpose Thick Film Standard Power Chip Resistor | SMD                        | YES <sup>(1)</sup>             | 100% Matte Sn over Ni             |
| RMCP                    | General Purpose Thick Film High-Power Chip Resistor     | SMD                        | YES <sup>(1)</sup>             | 100% Matte Sn over Ni             |

Note (1): RoHS compliant by means of exemption 7c-l.

## "Conflict Metals" Commitment

We at Stackpole Electronics, Inc. are joined with our industry in opposing the use of metals mined in the "conflict region" of the eastern Democratic Republic of the Congo (DRC) in our products. Recognizing that the supply chain for metals used in the electronics industry is very complex, we work closely with our own suppliers to verify to the extent possible that the materials and products we supply do not contain metals sourced from this conflict region. As such, we are in compliance with the requirements of Dodd-Frank Act regarding Conflict Minerals.

## Compliance to "REACH"

We certify that all passive components supplied by Stackpole Electronics, Inc. are SVHC (Substances of Very High Concern) free and compliant with the requirements of EU Directive 1907/2006/EC, "The Registration, Evaluation, Authorization and Restriction of Chemicals", otherwise referred to as REACH. Contact us for complete list of REACH Substance Candidate List.

## Environmental Policy

It is the policy of Stackpole Electronics, Inc. (SEI) to protect the environment in all localities in which we operate. We continually strive to improve our effect on the environment. We observe all applicable laws and regulations regarding the protection of our environment and all requests related to the environment to which we have agreed. We are committed to the prevention of all forms of pollution.

# RMCF / RMCP Series

General Purpose Thick Film Standard Power  
and High-Power Chip Resistor
